

# **Curso Vue.js + Ionic**

## **Sesión 2**

**Juan Searle. 13 junio 2022**

# ionic framework

7. Introducción a Ionic

8. Ionic CLI

9. Componentes UI

10. Estructura de Pages

11. Navegación y Router

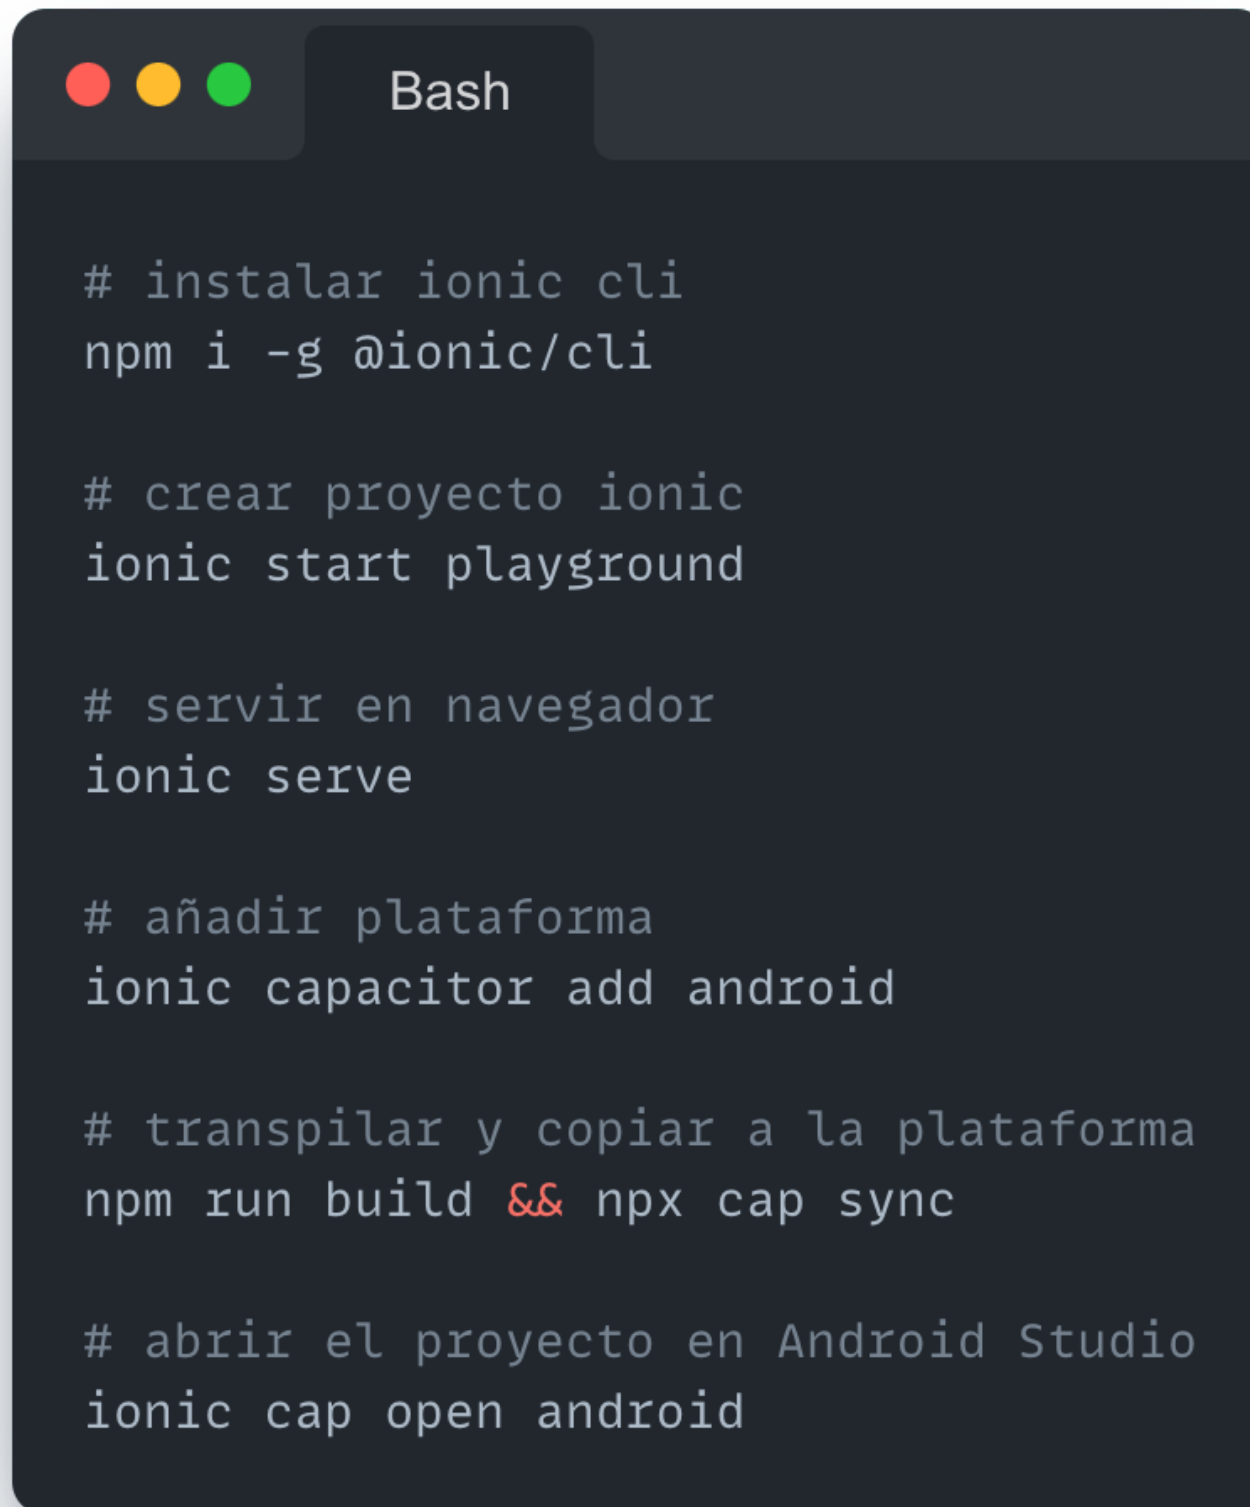

# 7. Introducción a Ionic

## Estructura básica

# 8. Ionic CLI

Ionic CLI:

A terminal window with a dark background and a title bar labeled 'Bash'. It contains a series of commands for setting up an Ionic project, each preceded by a comment in Spanish. The commands are: installing the Ionic CLI, creating a new project named 'playground', serving it in a browser, adding the Android platform, building the project and syncing it with the Android platform, and finally opening the project in Android Studio.

```
# instalar ionic cli
npm i -g @ionic/cli

# crear proyecto ionic
ionic start playground

# servir en navegador
ionic serve

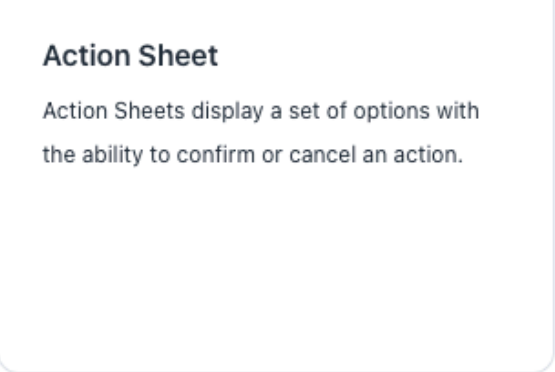

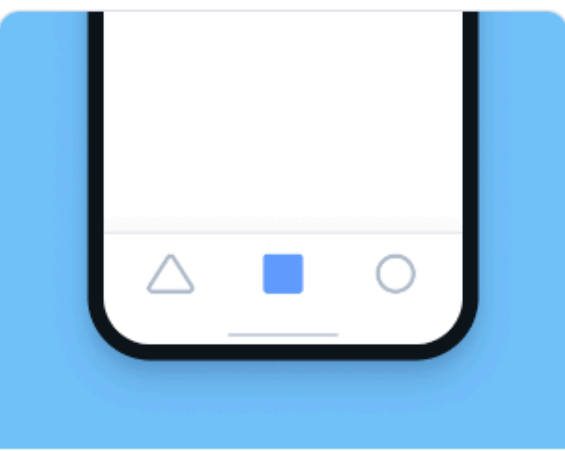

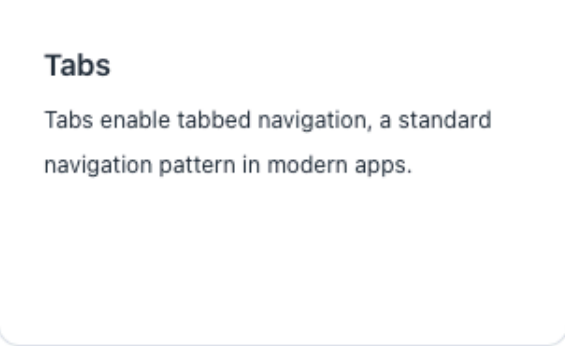

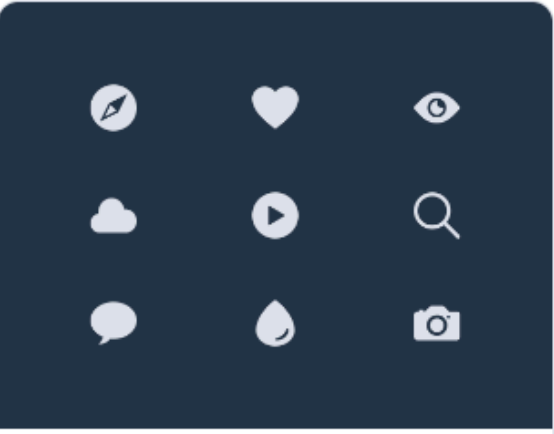

# añadir plataforma
ionic capacitor add android

# transpilar y copiar a la plataforma
npm run build && npx cap sync

# abrir el proyecto en Android Studio
ionic cap open android
```

# 9. Componentes UI de Ionic

## Componentes web con visual nativo

 <p><b>Action Sheet</b></p> <p>Action Sheets display a set of options with the ability to confirm or cancel an action.</p>	 <p><b>Alert</b></p> <p>Alerts are a great way to offer the user the ability to choose a specific action or list of actions.</p>	 <p><b>Badge</b></p> <p>Badges are a small component that typically communicate a numerical value to the user.</p>	 <p><b>Input</b></p> <p>Inputs provides a way for users to enter data in your app.</p>	 <p><b>Item</b></p> <p>Items are an all-purpose UI container that can be used as part of a list.</p>	 <p><b>List</b></p> <p>Lists can display rows of information, such as a contact list, playlist, or menu.</p>	 <p><b>Segment</b></p> <p>Segments provide a set of exclusive buttons that can be used as a filter or view switcher.</p>	 <p><b>Select</b></p> <p>Select is similar to the native HTML select, with a few improvements to sorting and selecting.</p>
 <p><b>Button</b></p> <p>Buttons let your users take action. They're an essential way to interact with and navigate through an app.</p>	 <p><b>Card</b></p> <p>Cards are a great way to display an important piece of content, and can contain images, buttons, text, and more.</p>	 <p><b>Navigation</b></p> <p>Navigation is how users move between different pages in your app.</p>	 <p><b>Menu</b></p> <p>Menus are a common navigation pattern. They can be permanently on-screen, or revealed when needed.</p>	 <p><b>Modal</b></p> <p>Modals slide in and off screen to display a temporary UI and are often used for login or sign-up pages.</p>	 <p><b>Toast</b></p> <p>Toast is used to show a notification over the top of an app's content. It can be temporary or dismissable.</p>		
 <p><b>Checkbox</b></p> <p>Checkboxes can be used to let the user know they need to make a binary decision.</p>	 <p><b>Chip</b></p> <p>Chips are a compact way to display data or actions.</p>	 <p><b>Content</b></p> <p>Content is the quintessential way to interact with and navigate through an app.</p>		 <p><b>Popover</b></p> <p>Popover provides an easy way to present information or options without changing contexts.</p>	 <p><b>Progress Indicators</b></p> <p>Progress indicators visualize the progression of an operation or activity.</p>	 <p><b>Tabs</b></p> <p>Tabs enable tabbed navigation, a standard navigation pattern in modern apps.</p>	 <p><b>Toolbar</b></p> <p>Toolbars are used to house information and actions relating to your app.</p>
 <p><b>Date &amp; Time Pickers</b></p> <p>Date &amp; time pickers are used to present an interface that makes it easy for users to select dates and times.</p>	 <p><b>Floating Action Button</b></p> <p>Floating action buttons are circular buttons that perform a primary action on a screen.</p>	 <p><b>Icons</b></p> <p>Beautifully designed icons for use in web, iOS, Android, and desktop apps.</p>	 <p><b>Radio</b></p> <p>Radio inputs allow you to present a set of exclusive options.</p>	 <p><b>Refresher</b></p> <p>Refresher provides pull-to-refresh functionality on a content component.</p>	 <p><b>Searchbar</b></p> <p>Searchbar is used to search or filter items, usually from a toolbar.</p>	 <p><b>Slides</b></p> <p>Slides make it easy to create complex UI such as galleries, tutorials, and page-based layouts.</p>	 <p><b>Toggle</b></p> <p>Toggles are an input for binary options, often used for options and switches.</p>
 <p><b>Grid</b></p> <p>The grid is a powerful mobile-first system for building custom layouts.</p>	 <p><b>Infinite Scroll</b></p> <p>Infinite scroll allows you to load new data as the user scrolls through your app.</p>		 <p><b>Reorder</b></p> <p>Reorder lets users drag and drop to reorder a list of items.</p>	 <p><b>Routing</b></p> <p>Routing allows navigation based on the current path.</p>			

# 9. Componentes UI de Ionic

## Lista de componentes vistos

- ion-button
- ion-grid
  - ion-row
  - ion-col
- ion-card
  - ion-card-content
  - ion-card-header
  - ion-card-title
  - ion-card-subtitle
- ion-list
  - ion-list-header
  - ion-item → ion-label
  - ion-item-sliding → ion-item-options → ion-item-option → ion-icon
- ion-input
  - ion-item → ion-label → ion-input
- ion-textarea
- ion-checkbox
- ion-select
  - ion-select-option
- ion-radio-group
  - ion-item → ion-radio
- ion-avatar
- ion-thumbnail
- ion-img
- ion-icon
  - <https://ionic.io/ionicons>
- ion-loading
- ion-progress-bar
- ion-spinner

# 10. Estructura de un <ion-page>

La plantilla básica de Ionic sobre Vue

```
HomePage.vue

<template>
  <ion-page>
    <ion-header :translucent="true">
      <ion-toolbar>
        <ion-buttons slot="start">
          <ion-menu-button color="primary"></ion-menu-button>
        </ion-buttons>
        <ion-title>Título de la página</ion-title>
      </ion-toolbar>
    </ion-header>

    <ion-content :fullscreen="true">
      <ion-header collapse="condense">
        <ion-toolbar>
          <ion-title size="large">Título de la página</ion-title>
        </ion-toolbar>
      </ion-header>

      <div id="container">

        </div>
      </ion-content>
      <ion-footer>
        <ion-toolbar>
          <ion-button>Recargar</ion-button>
        </ion-toolbar>
      </ion-footer>
    </ion-page>
  </template>
```

# 11. Navegación y el <ion-router>

Router en ionic (Vuejs)

```
router.ts

import { createRouter, createWebHistory } from '@ionic/vue-router';
import { RouteRecordRaw } from 'vue-router';

const routes: Array<RouteRecordRaw> = [
  {
    path: '',
    redirect: '/folder/Inbox'
  },
  {
    path: '/folder/:id',
    component: () => import ('../views/FolderPage.vue')
  }
]

const router = createRouter({
  history: createWebHistory(process.env.BASE_URL),
  routes
})

export default router
```

# 11. Navegación y el <ion-router>

Lista de componentes vistos

- router-link to
- ion-tabs → ion-tab-bar → ion-tab-button
  - ion-router-outlet
- ion-split-pane
  - ion-menu
    - ion-menu-toggle
- ion-popover
  - ion-content → ion-list → ion-item
- ion-action-sheet
- ion-alert
- ion-toast
